

Textbook Information

Math 207 PQ – Calculus 1
Fall 2014

The class's textbook policy is as follows. **Students must have a textbook but it does NOT have to be the official textbook designated for this course.** This policy is intended to lower textbook costs. Usually students can purchase a textbook for the course under \$40.

The textbook for this course is the 7th edition of *Calculus, Early Transcendentals* by James Stewart (Books/Cole, 2012; ISBN Number: 978-0-538-49790-9 or 978-0-8400-5885-0). Students are welcome to use any previous edition at a much lower cost. Students also may rent or purchase e-versions of a calculus book

Students also may use other calculus books. However, it is essential that students use a text that is labeled **early transcendentals**. These include any early transcendental version (any edition) of calculus textbooks written by:

Soo T. Tan
George B Thomas
Ron Larson

Jerrold E. Marsden
Deborah Hughes-Hallett
William Briggs

Those students who intend to pursue mathematics as their major, they will see calculus again, later in their undergraduate studies. That second glimpse into calculus will include much more rigor and in-depth knowledge. For that adventure, Michael Spivak's *Calculus* text is highly recommended.

Topics In the Textbook

Preface xi
To the Student xxiii
Diagnostic Tests xxiv

Chapter 1 – Functions and Models

1.1 Four Ways to Represent a Function 10
1.2 Mathematical Models: A Catalog of Essential Functions 23
1.3 New Functions from Old Functions 36
1.4 Graphing Calculators and Computers 44
1.5 Exponential Functions 51
1.6 Inverse Functions and Logarithms 58
Review 72

Chapter 2 – Limits and Derivatives

2.1 The Tangent and Velocity Problems 82
2.2 The Limit of a Function 87
2.3 Calculating Limits Using the Limit Laws 99
2.4 The Precise Definition of a Limit 108
2.5 Continuity 118
2.6 Limits at Infinity; Horizontal Asymptotes 130
2.7 Derivatives and Rates of Change 143
2.8 The Derivative as a Function 154
Review 165
Problems Plus 170

Chapter 3 – Differentiation Rules

3.1 Derivatives of Polynomials and Exponential Functions 174
3.2 The Product and Quotient Rules 184
3.3 Derivatives of Trigonometric Functions 191
3.4 The Chain Rule 198
3.5 Implicit Differentiation 209
3.6 Derivatives of Logarithmic Functions 218
3.7 Rates of Change in the Natural and Social Sciences 224
3.8 Exponential Growth and Decay 237
3.9 Related Rates 244
3.10 Linear Approximations and Differentials 250
3.11 Hyperbolic Functions 257
Review 264
Problems Plus 268

Chapter 4 – Applications of Differentiation

4.1 Maximum and Minimum Values 274
4.2 The Mean Value Theorem 284
4.3 How Derivatives Affect the Shape of a Graph 290
4.4 Indeterminate Forms and l'Hospital's Rule 301
4.5 Summary of Curve Sketching 310
4.6 Graphing with Calculus and Calculators 318
4.7 Optimization Problems 325
4.8 Newton's Method 338
4.9 Antiderivatives 344
Review 351
Problems Plus 355

Chapter 5 – Integrals

5.1 Areas and Distances 360
5.2 The Definite Integral 371
5.3 The Fundamental Theorem of Calculus 386
5.4 Indefinite Integrals and the Net Change Theorem 397
5.5 The Substitution Rule 407
Review 415
Problems Plus 419

Chapter 6 – Applications of Integration

6.1 Areas Between Curves 422
6.2 Volumes 430
6.3 Volumes by Cylindrical Shells 441
6.4 Work 446
6.5 Average Value of a Function 451
Review 457
Problems Plus 459

Chapter 7 – Techniques of Integration

7.1 Integration by Parts 464
7.2 Trigonometric Integrals 471
7.3 Trigonometric Substitution 478
7.4 Integration of Rational Functions by Partial Fractions 484
7.5 Strategy for Integration 494
7.6 Integration Using Tables and Computer Algebra Systems 500
7.7 Approximate Integration 506
7.8 Improper Integrals 519
Review 529
Problems Plus 533

Chapter 8 – Further Applications of Integration

8.1 Arc Length 538
8.2 Area of a Surface of Revolution 545
8.3 Applications to Physics and Engineering 552
8.4 Applications to Economics and Biology 563
8.5 Probability 568
Review 575
Problems Plus 577

Chapter 9 – Differential Equations

9.1 Modeling with Differential Equations 580
9.2 Direction Fields and Euler's Method 585
9.3 Separable Equations 594
9.4 Models for Population Growth 605
9.5 Linear Equations 616
9.6 Predator-Prey Systems 622
Review 629
Problems Plus 633

Chapter 10 – Parametric Equations and Polar Coordinates

- 10.1 Curves Defined by Parametric Equations 636
- 10.2 Calculus with Parametric Curves 645
- 10.3 Polar Coordinates 654
- 10.4 Areas and Lengths in Polar Coordinates 665
- 10.5 Conic Sections 670
- 10.6 Conic Sections in Polar Coordinates 678
 - Review 685
 - Problems Plus 688

Chapter 11 – Infinite Sequences and Series

- 11.1 Sequences 690
- 11.2 Series 703
- 11.3 The Integral Test and Estimates of Sums 714
- 11.4 The Comparison Tests 722
- 11.5 Alternating Series 727
- 11.6 Absolute Convergence and the Ratio and Root Tests 732
- 11.7 Strategy for Testing Series 739
- 11.8 Power Series 741
- 11.9 Representations of Functions as Power Series 746
- 11.10 Taylor and Maclaurin Series 753
- 11.11 Applications of Taylor Polynomials 768
 - Review 778
 - Problems Plus 781

Chapter 12 – Vectors and the Geometry of Space

- 12.1 Three-Dimensional Coordinate Systems 786
- 12.2 Vectors 791
- 12.3 The Dot Product 800
- 12.4 The Cross Product 808
- 12.5 Equations of Lines and Planes 816
- 12.6 Cylinders and Quadric Surfaces 827
 - Review 834
 - Problems Plus 837

Chapter 13 – Vector Functions

- 13.1 Vector Functions and Space Curves 840
- 13.2 Derivatives and Integrals of Vector Functions 847
- 13.3 Arc Length and Curvature 853
- 13.4 Motion in Space: Velocity and Acceleration 862
 - Review 873
 - Problems Plus 876

Chapter 14 – Partial Derivatives

- 14.1 Functions of Several Variables 878
- 14.2 Limits and Continuity 892
- 14.3 Partial Derivatives 900
- 14.4 Tangent Planes and Linear Approximations 915
- 14.5 The Chain Rule 924
- 14.6 Directional Derivatives and the Gradient Vector 933
- 14.7 Maximum and Minimum Values 946
- 14.8 Lagrange Multipliers 957
 - Review 967
 - Problems Plus 971

Chapter 15 – Multiple Integrals

- 15.1 Double Integrals over Rectangles 974
- 15.2 Iterated Integrals 982
- 15.3 Double Integrals over General Regions 988
- 15.4 Double Integrals in Polar Coordinates 997
- 15.5 Applications of Double Integrals 1003
- 15.6 Surface Area 1013
- 15.7 Triple Integrals 1017
- 15.8 Triple Integrals in Cylindrical Coordinates 1027
- 15.9 Triple Integrals in Spherical Coordinates 1033
- 15.10 Change of Variables in Multiple Integrals 1040
 - Review 1049
 - Problems Plus 1053

Chapter 16 – Vector Calculus

- 16.1 Vector Fields 1056
- 16.2 Line Integrals 1063
- 16.3 The Fundamental Theorem for Line Integrals 1075
- 16.4 Green's Theorem 1084
- 16.5 Curl and Divergence 1091
- 16.6 Parametric Surfaces and Their Areas 1099
- 16.7 Surface Integrals 1110
- 16.8 Stokes' Theorem 1122
- 16.9 The Divergence Theorem 1128
- 16.10 Summary 1135
 - Review 1136
 - Problems Plus 1139

Chapter 17 – Second-Order Differential Equations

- 17.1 Second-Order Linear Equations 1142
- 17.2 Nonhomogeneous Linear Equations 1148
- 17.3 Applications of Second-Order Differential Equations 1156
- 17.4 Series Solutions 1164
 - Review 1169

Appendixes

- A Numbers, Inequalities, and Absolute Values A2
- B Coordinate Geometry and Lines A10
- C Graphs of Second-Degree Equations A16
- D Trigonometry A24
- E Sigma Notation A34
- F Proofs of Theorems A39
- G The Logarithm Defined as an Integral A50
- H Complex Numbers A57
- I Answers to Odd-Numbered Exercises A65

Index A135
